                                                                                                                                                                      Sequence 5, Application US/08778717

Sequence 5, Application US/08778717

Patent No. 6602689

GENERAL INFORMATION:

APPLICANT: UENO, EIICHI
APPLICANT: OKADA, MASAHISA

TITLE OF INVENTION: EXPRESSED FROM SAID FUSED PROTEIN

TITLE OF INVENTION: EXPRESSED FROM SAID FUSED DNA SEQUENCE AND METHOD FOR TITLE OF INVENTION: EXPRESSING SAID DNA SEQUENCE

NUMBER OF SEQUENCES: 21

CORRESPONDENCE ADDRESS:

ADDRESSEE: OBLON, SPIVAK, MCCLELLAND, MAIER & NEUSTADT,
ADDRESSEE: P.C.

STREET: 1755 S. JEFFERSON DAVIS HIGHWAY, SUITE 400
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         2563 CCGACACCATCGAATGGTGCAAAACCTTTCGCGGTATGGCATGATAGCGCCCGGAAGAGA 2622

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The patent discloses methods and compositions to modulate the expression of a target gene in plant cells. The method involves providing plant cells with a zinc finger protein (ZFP) which is capable of specifically binding to a target nucleotide sequence or its complementary strand within a target gene and allowing the ZFP binding to the target nucleotide sequence, where the expression of the target gene in the plant cells is modulated. The ZFP and fusions of the ZFP proteins are useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New zinc finger proteins, useful for modulating or regulating gene expression and metabolic pathways in plants, e.g. for treating in the plant cells a disorder that is associated with abnormal expression of the target gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   GIGICICITATCAGACCGTTTCCCCGCGTGGTGAACCAGGCCAGCCACGTTTCTGCGAAAA 180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      for modulating or regulating gene expression and metabolic pathways in plants. The ZFP, fusion proteins and methods are useful in plant and agricultural technology. The method is useful particularly for treating disorder in the plant cells, where the disorder is associated with abnormal expression of the target gene. The present DNA sequence is the partial sequence of pMal-Ap3 (APETALA3) and ZFPAp3 DNA

                    The patent discloses methods and compositions to modulate the expression of a target gene in plant cells. The method involves providing plant cells with a zinc finger protein (ZFP) Which is capable of specifically binding to a target nucleotide sequence or its complementary strand within a target gene and allowing the ZPP binding to the target cells within a target gene and allowing the ZPP binding to the target cells is modulated. The ZPP and fusions of the ZPP proteins are useful cor modulating or regulating gene expression of the target gene in the plant for modulating or regulating agene expression and metabolic pathways in agricultural technology. The method is useful particularly for treating a gricultural technology. The method is useful particularly for treating a disorder in the plant cells, where the disorder is associated with partial sequence of pMal-m4 and ZPPm4 bNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             180

The patent discloses methods and compositions to modulate the expression of a target gene in plant cells. The method involves providing plant cells with a zinc finger protein (EFP) Which is capable of specifically binding to a target nucleotide sequence or its complementary strand within a target gene and allowing the ZPP binding to the target gene within a target gene and allowing the ZPP binding to the target cells is modulated. The ZPP and fusions of the ZPP proteins are useful for modulating or regulating gene expression and metabolic pathways in plants. The ZPP, fusion proteins and methods are useful in plant and agricultural technology. The method is useful particularly for treating a disorder in the plant cells, where the disorder is associated with abnormal expression of the target gene. The present DNA sequence is the partial sequence of pMal-m1 and ZPPm1 DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New zinc finger proteins, useful for modulating or regulating gene
expression and metabolic pathways in plants, e.g. for treating in the
plant cells a disorder that is associated with abnormal expression of the
target gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 3300 BP; 847 A; 874 C; 876 G; 703 T; 0 U; 0 Other;

the

The patent discloses methods and compositions to modulate the expression of a target gene in plant cells. The method involves providing plant cells with a zinc finger protein (EPP) which is capable of specifically binding to a target nucleotide sequence or its complementary strand within a target gene and allowing the ZFP binding to the target nucleotide sequence, where the expression of the target gene in the plant cells is modulated. The ZFP and fusions of the ZFP proteins are useful for modulating or regulating gene expression and metabolic pathways in plants. The ZFP, fusion proteins and methods are useful in plant and agricultural technology. The method is useful particularly for treating a disorder in the plant cells, where the disorder is associated with partial sequence of pMal-m2 and ZFPm2 DNA New zinc finger proteins, useful for modulating or regulating gene expression and metabolic pathways in plants, e.g. for treating in the plant cells a disorder that is associated with abnormal expression of Example 4; Page 140-142; 156pp; English P-PSDB; AAE06002

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The patent discloses methods and compositions to modulate the expression of a target gene in plant cells. The method involves providing plant cells with a zinc finger protein (ZFP) which is capable of specifically binding to a target nucleotide sequence or its complementary strand within a target gene and allowing the ZFP binding to the target molectide sequence, where the expression of the target gene in the plant cells is modulated. The ZFP and fusions of the ZFP proteins are useful for modulating or regulating gene expression and metabolic pathways in plants. The ZFP, fusion proteins and methods are useful in plant and agricultural technology. The method is useful particularly for treating a disorder in the plant cells, where the disorder is associated with abnormal expression of the target gene. The present DNA sequence is the Partial sequence of pWal-m3 and ZFPM3 DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New zinc finger proteins, useful for modulating or regulating gene expression and metabolic pathways in plants, e.g. for treating in the plant cells a disorder that is associated with abnormal expression of

                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence encodes human Cdc25C phosphatase, and was expressed in Escherichia coli. It is used to make fusion proteins with Escherichia coli maltones binding protein (MBP). The specification describes fusion proteins of MBP and one of Cdc 25B1, 25B2, 25B3 and 25C. Cdc phosphatases are involved in activation of cyclin-dependent kinases (CDK) that control cell division. The fusion proteins are used to identify modulators of the specified human Cdc phosphatases, potentially useful for regulation of cell division. They are also for studying physiological or physiopathological activities of Cdc phosphatase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               360
                                                                                                                                                                                                                                                                                                                                                      New fusion protein of maltose-binding protein and Cdc phosphatase, useful for identifying phosphatase modulators for regulating the cell cycle.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence represents pMAL-HsCdc25C, a plasmid encoding human cdc25C phosphatase. The specification describes the use of aryl-substituted secondary or tertiary amines for the production of medicaments for inhibiting Cdc25 phosphatases, especially Cdc25C phosphatases. The amines of the invention are used for treating spontaneous alopecia or alopecia induced by exogenous products or radiation. They are also used for treating tumoural or non-tumoural proliferative diseases, parasitic diseases, viral infections, proliferative diseases are e.g. anglogenesis, psoriais or restenosis. proliferative diseases are e.g. anglogenesis, psoriais or restenosis. The amines are also useful for inhibiting the proliferation of microorganisms (especially yeasts) and in the treatment of all disorders conventionally treated with vitamin K or its derivatives
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      cdc25 Phosphatase inhibiting medicaments, useful e.g. for treating diseases, viral infections, neurodegenerative disease or alopecia, containing new or known aryl-substituted amines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 /*tag= b

```
The invention relates to a purified P30 antigen (1) chosen from 3 fully defined Toxo30de13C, Toxo30de12C and ToxoP30 MIX1 sequences, having 1-6 amino acids added to the C-terminus of the amino acid sequence of Toxo30de12C P30 antigen sequence, or comprising an amino acid sequence in which at least one of the five C-terminal cysteine amino acid sequence in amino acid sequence of Toxo30de13C P30 antigen sequence is substituted with alanine, or comprising the amino acid sequence chosen from MBP-Toxo30de14C(52-294aa) and MBP-Toxo30mIX1 [Toxo30de13C(52-300aa), MBP-Toxo30de14C(52-294aa) and MBP-Toxo30mIX1 [Toxo30de14C(52-294aa) and mBp-Toxo30mIX1] [Toxo30de13C(52-300aa), mBP-Toxo30de14C(52-294aa) and mBp-Toxo30mIX1 [Toxo30de14C(52-294aa)] and mBp-Toxo30mIX1 [Toxo30de14C(52-294aa)] and mBp-Toxo30mIX1 [Toxo40de15C] [Toxo40de15C] [Toxo40de15C] [Toxo40de15C] [Toxo40de15C] [Toxo50de15C]                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  180
